

CODELOCKS PRESS RELEASE

MARCH 2018: New lock brings codeless functionality to the KitLock range

The new KL1050 can replace virtually any existing cam lock, providing codeless access capabilities to lockers, cabinets and enclosures

IRVINE, CALIFORNIA, 22 MARCH 2018

Codelocks Inc. a leader in access control innovation, has announced the latest addition to its KitLock range. Building on the capabilities of the KL1000, the new keyless cam lock can be retrofitted to a wide range of lockers, cabinets, cupboards and enclosures.

The KL1050 uses smart card technology to provide codeless access to almost any locker. The new easy-to-fit lock offers functions for single users (Private Function) and short-term use by multiple users (Public Function). The lock can perform up to 15,000 openings on two AAA batteries.

The Public Function means that once a user unlocks the KL1050, it will remain in an unlocked state, ready for any other compatible MIFARE™ card to be used. Pre-registration of the card is not required, meaning that any compatible MIFARE™ card can be used, with no need for additional programming.

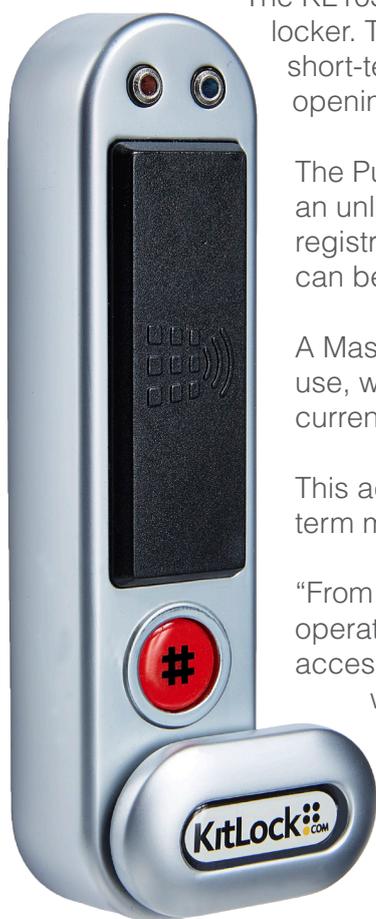

A Master User Card can be used to open any lock and delete the card currently in-use, while a Technician Card can be used to open the lock, retaining the User Card currently in use.

This advanced functionality makes the KL1050 ideally suited to a wide range of short-term multi-occupancy applications.

“From hospitals and offices, to schools and gyms, many organizations rely on coin-operated lockers on a daily basis. Our KitLock range enables easy, convenient access and with the introduction of the KL1050, now codeless access. Suitable for a wide range of applications, the lock is a quick, affordable retrofit with a number of functions for short and extended use,” said Colin Campbell, President, Codelocks Inc.

Codelocks Inc. will be attending ISC West, Las Vegas 11-13 April and will be showcasing the KL1050 and its smart lock products at booth number 25136. In the meantime, for more information on the new KL1050 visit:

ABOUT KITLOCK

KitLock is a convenient and stylish alternative to traditional key-operated locker locks. Cabinets and lockers in any setting, including gyms, leisure centers, schools, hospitals, data centers and offices can be opened using a keypad code, eliminating the inconvenience of keys, tokens or coins. KitLock is a cost effective and quick retrofit solution to replace standard key cam locks. The locks can be programmed for short term, multiple occupancy or for repeated use. The option to use smart cards as an alternative to codes is also available. KitLock offers locks that feature NetCode, which allows temporary access by creating time-sensitive codes via the NetCode portal or API (application programming interface).

ABOUT CODELOCKS INC.

Codelocks designs and manufactures a wide range of innovative, standalone keyless door, locker and cabinet locks for organizations that need to control access within their buildings. The product range includes stylish push-button mechanical locks, digital electronic and wireless 'smart' locks that are easy to manage and can be operated using a keypad, card and smartphone. Convenience is at the heart of all of Codelocks Inc. products. Our user-friendly approach enables building and facilities managers to have complete control over who is entering and exiting. The locks are cost-effective, easy to fit and program, can be retrofitted and do not require complex wiring or external power. We offer full access to expert technical advice and customer support.
