Latest KitLock by Codelocks makes access control even easier

Rancho Cucamonga, CA, 29 September 2021

Codelocks Inc., a leading access control company that designs and distributes innovative, keyless door locks and access solutions, announces the expansion of its KitLock range of products with a new keyless access control solution for storage cabinets and lockers.

The KL1000 G3 is a flexible solution, ideal for workplaces, staff rooms, storage areas and gyms, providing immediate, convenient keypad access without the need for cards and keys, meeting the needs for less person-to-person contact, including administration by facilities management. The new KitLock, enhanced with a key override function, allows key holders to access the locker in the event of a forgotten code or emergency, increasing flexibility for managers, staff, and guests. With two finishes – silver chrome and black chrome – this modern lock showcases a slimmer, more subtle aesthetic.

“The KL1000 G3 is perfect for environments where cabinets and lockers may be used for multi-use occupancy or by an individual student or employee; for example, corporate offices, schools, and hospitals, where workers may divide time between working from home and the office,” said Matt Welty, Vice President, Americas at Codelocks. “And with many businesses giving their employees the option of hybrid working, we’re seeing a greater demand for controlled storage access that provide easy and secure locking solutions.”

The KL1000 G3 comes with all the popular features of the KL1000 Classic Plus including Private and Public Functions, a 24-hour auto-unlock countdown timer in Public Function, and up to 20 User Codes in Private Function. As the KL1000 G3 shares the same fastenings and door prep as existing KL1000, installations can be easily upgraded and retrofitted.

The KL1000 G3 has been developed with the battery compartment accessible via the front of the lock, simplifying the process of changing batteries. This design feature reduces the time and disruption of changing batteries. In addition, the KL1000 G3 can be enhanced with the Codelocks Slam Latch for fast ‘push shut’ closure. It allows locker doors to be instantly locked, with no need to turn the lock handle to secure the locker. Slam Latch works on wooden and steel lockers and cabinets.

Now, customers can choose to add Clean by Codelocks, an optional antibacterial finish that protects against viruses, bacteria, and environmental toxins. The clear coating has been shown to be highly effective at eliminating the SARS-CoV-2 coronavirus and can reduce bacterial growth by 99.96%*.
